                                                                                                                                 FUNCTION: THE SHOPT COLLAGEN-LIKE REGION IS PROPOSED TO ACT AS TRIMERIZATION SIGNAL LEADING TO THE FULFILLMENT OF THE SYMMETRY REQUIREMENT OF THE MINOR CAPSOMER.
SUBUNIT: THE PRDI VIRION IS COMPOSED OF AN ICOSAHEDRAL PROTEIN COAT, AN INNER PROTEIN-LIPID MEMBRANE, AND A DSDNA GENOME WHICH IS LOCATED INSIDE THE LIPID VESICLE. THE PROTEIN COAT CONSISTS MAINLY OF PROTEIN P3. THE MINOR PROTEIN P5 IS ALSO CONSIDERED T CONSTITUTE PART OF THE PROTEIN COAT.
SIMILARITY: CONTAINS A COLLAGENOUS DOMAIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                        G

                                                                                                           COCHLEA, LUNG AND BRAIN.

DOMAIN: ALPHA CHAINS OF TYPE IV COLLAGEN HAVE A NONCOLLAGENOUS DOMAIN: ALPHA CHAINS OF THE FORTH THE LORD CENTRAL TRIPLE-HELICAL DOMAIN (WHICH I G-X-Y REPEATS IN THE LONG CENTRAL TRIPLE-HELICAL DOMAIN (WHICH I CAUSE FLEXIBILITY IN THE TRIPLE HELIX), AND A SHORT N-TERMINAL TRIPLE-HELICAL 7S DOMAIN.

PTM: PROLINES AT THE THIRD POSITION OF THE TRIPEPTIDE REPEATING UNIT (G-X-Y) ARE HYDROXYLATED IN SOME OR ALL OF THE CHAINS.

PTM: TYPE IV COLLAGENS CONTAIN NUMEROUS CYSTEINE RESIDUES WHICH ARE INVOLVED IN INTER-AND INTRAMOLECULAR DISULFIDE BONDING. 12

SUBUNIT: THERE ARE SIX TYPE IV COLLAGEN ISOFORMS, ALPHA 1 (
ALPHA 6(IV), EACH OF WHICH CAN FORM A TRIPLE HELIX STRUCTU
WITH 2 OTHER CHAINS TO GENERATE TYPE IV COLLAGEN NETWORK.
SUBCELLULAR LOCATION: CELL SURFACE (POTENTIAL).
TISSUE SPECIFICITY: ALPHA 3 AND ALPHA 4 TYPE IV COLLAGENS
COLOCALIZED AND PRESENT ONLY IN BASEMENT MEMBRANES OF KIDN
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Y., Verellen-Dumoulin

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            DISEASE: DEFECTS IN COL4A4 ARE ASSOCIATED WITH FAMILIAL BENIGN HEMATURIA (FBH) OR THIN BASEMENT MEMBRANE DISEASE. FBH IS CHARACTERIZED BY PERSISTENT HEMATURIA, AN ELECTRON MICROSCOPICALLY DETECTABLE THIN GLOWERULAR BASEMENT MEMBRANE (GBM) AND AN AUTOSOMAL DOMINANT MODE OF INHERITANCE. RENAL FUNCTION REMAINS NORMAL. IN CHILDREN DIFFERENTIATION BETWEEN FBH AND AS CAN BE DIFFICULT, BECAUSE BOTH DISORDERS ARE MANIFESTED BY PERSISTENT HEMATURIA AND THIN GBM AT THAT AGE.

SIMILARITY: TO OTHER TYPE IV COLLAGENS.

DOMAIN: ALPHA CHAINS OF TYPE IV COLLAGEN HAVE A NONCOLLAGENOUS DOMAIN (NC1) AT THEIR C-TERMINUS, FREQUENT INTERRUPTIONS OF THE GAY. Y REPEATS IN THE LONG CENTRAL TRIPLE-HELICAL DOMAIN (HHICH M CAUSE FLEXIBILITY IN THE TRIPLE HELIX), AND A SHORT N-TERMINAL TRIPLE-HELICAL 7S DOMAIN.

TRIPLE-HELICAL 7S DOMAIN.

PTM: PROLINES AT THE THIRD POSITION OF THE TRIPLEPTIDE REPEATING UNIT (G-X-Y) ARE HYDROXYLATED IN SOME OR ALL OF THE CHAINS.

PTM: TYPE IV COLLAGENS CONTAIN NUMEROUS CYSTEINE RESIDUES WHICH ARE INVOLVED IN INTER- AND INTRAMOLECULAR DISULFIDE BONDING. 12 THESE, LOCATED IN THE NC1 DOMAIN, ARE CONSERVED IN ALL KNOWN TYPE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   IV COLLAGENS.

                                                                SUBUNIT: THERE ARE SIX TYPE IV COLLAGEN ISOFORMS, ALPHA 1(IV)-ALPHA 6(IV), EACH OF WHICH CAN FORM A TRIPLE HELLX STRUCTURE WITH 2 OTHER CHAINS TO GENERATE TYPE IV COLLAGEN NETWORK.

SUBCELLULAR LOCATION: CELL SURFACE (POTENTIAL).

DOMAIN: ALPHA CHAINS OF TYPE IV COLLAGEN HAVE A NONCOLLAGENOUS DOMAIN (NC1) AT THEIR C-TERMINUS, FREQUENT INTERRUPTIONS OF THE G-X-Y REPEATS IN THE LONG CENTRAL TRIPLE-HELICAL DOMAIN (WHICH N CAUSE FLEXIBILITY IN THE TRIPLE HELIX), AND A SHORT N-TERMINAL TRIPLE-HELICAL 7S DOMAIN.

TRIPLE-HELICAL 7S DOMAIN.

PTM: PROLINES AT THE THIRD POSITION OF THE TRIPEPTIDE REPEATING THE TRIPLE THIRD POSITION OF THE TRIPEPTIDE REPEATING
UNIT (G-X-Y) ARE HYDROXYLATED IN SOME OR ALL OF THE CHAINS. PTM: TYPE IV COLLAGENS CONTAIN NUMEROUS CYSTEINE RESIDUES WHARE INVOLVED IN INTER- AND INTRAMOLECULAR DISULFIDE BONDING. THESE, LOCATED IN THE NC1 DOMAIN, ARE CONSERVED IN ALL KNOWN IV COLLAGENS.

WITH 2 OTHER CHAINS TO GENERATE TYPE IV COLLAGEN NETWORK.

-I- SUBCELLULAR LOCATION: CELL SUFFACE (POTENTIAL).

-I- DOMAIN: ALPHA CHAINS OF TYPE IV COLLAGEN HAVE A NONCOLLAGENOUS
DOMAIN (NC1) AT THEIR C-TERMINUS, FREQUENT INTERRUPTIONS OF THE
G-X-Y REPEATS IN THE LONG CENTRAL TRIPLE-HELICAL DOMAIN (WHICH MAY
CAUSE FLEXIBILITY IN THE TRIPLE HELIX), AND A SHORT N-TERMINAL
TRIPLE-HELICAL 7S DOMAIN.

-I- PTM: TYPE IV COLLAGENS CONTAIN NOME OF THE TRIPETINE REPEATING
UNIT (G-X-Y) ARE HYDROXYLATED IN SOME OF THE CHAINS.

-I- PTM: TYPE IV COLLAGENS CONTAIN NUMEROUS CYSTEINE RESIDUES WHICH
ARE INVOLVED IN INTER- AND INTRAMOLECULAR DISULFIDE BONDING. 12 OF
THESE, LOCATED IN THE NC1 DOMAIN, ARE CONSERVED IN ALL KNOWN TYPE
         DOMAIN

```
And tumor growth, plays a critical role in the maintenance of retinal restructure and in neural tube closure.";

RI Hum. Mol. Genet. 9:2051-2058(2000).

RI Hum. Mol. Genet. 9:2051-2058(2000).

RI Hum. Mol. Genet. 9:2051-2058(2000).

RETINAL STRUCTURE AS WELL AS IN THE CLOSURE OF THE NEURAL TUBE.

CC -!- FUNCTION: ENDOSTATIN POTENTLY INHIBITS ENDOTHELIAL CELL
PROLIFERATION AND ANGIOGRMESIS. MAY INHIBIT ANGIOGRMESIS BY
BINDING TO THE HEPARAN SULPHATE PROTEOGLYCANS INVOLVED IN GROWTH

CC PROLIFERATION AND ANGIOGRMESIS. AND A LONG
PACTOR SIGNALLING (BY SIMILARITY).

CC -!- ALTERNATIVE PRODUCTS: 2 ISOFORMS: A SHORT FORM, NC1-303 AND A LONG
FORM, NC-493 (SHOWN HERE); ARE PRODUCED BY ALTERNATIVE SPLICING.

CC -!- TISSUE SPECIFICITY: PRESENT IN MULTIPLE ORGANS WITH HIGHEST LEVELS

CC -!- TISSUE SPECIFICITY: PRESENT IN MULTIPLE ORGANS WITH HIGHEST LEVELS

CC -!- TISSUE SPECIFICITY: PRESENT IN MULTIPLE ORGANS WITH HIGHEST LEVELS

CC -!- TISSUE SPECIFICITY: PRESENT IN COLIBAL ARE A CAUSE OF KNOBLOCH SYNDROME (KS);

CC -!- DISEASE: DEFECTS IN COLIBAL ARE A CAUSE OF KNOBLOCH SYNDROME (KS);

CC -!- DISEASE: DEFECTS IN COLIBAL ARE A CAUSE OF KNOBLOCH SYNDROME (KS);

CC -IN SUTTREORETINAL DEGENERATION WITH RETINAL DETACHMENT,

MACULAR ABNORMALITIES AND DCCIPITAL ENCEPHALOCELE.

CC -IS SIMILARITY: BELONGS TO THE MILITIPLEXIN FRMILY OF COLLAGENS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         RX MEDIINE-20289799; PubMed-10830953;

Lipid Res. 36:1305-1314(1995).

-I- FUNCTION: MEMBRANE GLYCOPROTEINS IMPLICATED IN THE PATHOLOGIC DEPOSITION OF CHOLESTEROL IN ARTERIAL WALLS DURING ATHEROGENESIS.
TWO TYPES OF RECEPTOR SUBUNITS EXIST. THESE RECEPTORS MEDIATE THE ENDOCYTOSIS OF A DIVERSE GROUP OF MACROMOLECULES, INCLUDING MODIFIED LOW DENSITY LIPOPROTEINS (LDL).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              SEQUENCE OF 349-458 FROM N.A.
